linearAlgebra: Linear Algebra Helpers

Ivan Jacob Agaloos Pesigan

Description

Linear algebra helpers: vectorization and half-vectorization, symmetric matrices from their half-vectorization, the duplication matrix and its Moore-Penrose inverse, deviation scores, and tests for symmetric and positive definite matrices. Each exported function has an internal version without input checks that other projects can copy.

Installation

You can install the development version of `linearAlgebra` from GitHub with:

```
if (!requireNamespace(package = "pak", quietly = TRUE)) {
  utils::install.packages(pkgs = "pak")
}
pak::pkg_install(pkg = "ijapesigan/linearAlgebra")
```

More Information

See GitHub Pages for package documentation.
